

Recycling and Waste Management Research

Omnibus Q1 2021

Methodology Summary

- Findings are based on an online survey of n=1,992 residents of Australia conducted between January 22 30, 2020
- Three previous rounds have been conducted:
 - Round 1 between 1 6 September 2019 with a sample size of n=2,000.
 - Round 2 between 15 23 March 2020 with a sample size of n=1,500.
 - Round 3 between 21 25 August 2020 with a sample size of n=2,011.
- The results are representative of age, gender, region and past vote (among 18+ year-olds) through sampling quotas and ex-post weighting where required.
- The maximum margin of error for this sample size is +/- 2.2% at a 95% confidence level. Higher margins of error exist for smaller subsamples and net scores.
- Research focused on tracking public sentiment across a range of issues, including underlying behaviors and attitudes in response to COVID-19, Government responses and policy developments across a range of industries.
- The latest version of this study includes high level metrics exploring public sentiment toward recycling and waste management policy issues.

Issue Agenda (Prob. Ranked 1st)

- Normalcy has not yet returned
- COVID-19 has not gone away as an issue priority in Australia
- The framing of the COVID-19 challenge is now reaching a balance between public health and economic priorities

Issues: Track (Rank among Tracked Issues)

Stopping the spread of COVID-19 Delivering better healthcare services Reducing the cost of living Improving aged care services Reducing the cost of living Improving aged care services Reducing the cost of living Improving aged care services Reducing the cost of living Fair distribution of welfare & pensions Supporting rural communities Reducing the level of crime Looking after the natural environment Managing immigration & securing our borders Maintaining high education standards Managing immigration & securing our borders Peducing taxes Reducing taxes Reducing taxes Reducing tongestion Reducing congestion Reducing congestion ■	Aug-2020	Feb-2021	Change

	Reducing congestion	Reducing congestion	=

 The agenda remains relatively unchanged over the last 9 months

Satisfaction with Governments' Efforts

- Consistent perceptions across government jurisdictions despite varied touchpoints and policy responses.
- High level of softness in views (somewhat and neither), indicating political disengagement with governments on waste policy.

- Australian waste behaviors are misaligned with the common waste hierarchy, with a greater prevalence of recycling (sorting) than reusing.
- Organics composting remains the least prevalent waste behavior.

Awareness of Bans on Waste Exporting

- True awareness remains low at less than a quarter of Australians.
- This will present political complications for the Federal Government in creating a political impetus for stimulating waste infrastructure investment.

Agreement that Australia is Recycling Enough

- Views on Australia's recycling performance is similarly weak (69% weak response),
- A near majority nominate insufficient recycling

Australian Government Initiatives – Highest Priority

- Preferences across priority initiatives are relatively scattered (24% maximum prioritisation) indicating a lack of public consensus
- Supporting EfW as a means to increase recycling rates is the most frequently prioritised initiative
- Regulation of packaging materials is similarly supported

Australian Government Initiatives – Lowest Priority

- Reflecting cost of living sensitivity, opposition against waste levy increases is strongest
- Other initiatives show secondary (and comparable) opposition
